Το Συνέδριο με τίτλο «Η Ελεύθερνα, η Κρήτη και ο Έξω Κόσμος» διοργανώθηκε από το Πανεπιστήμιο Κρήτης, το Κέντρο Έρευνας και Μελέτης του Μουσείου αρχαίας Ελεύθερνας και την Μεσογειακή Αρχαιολογική Εταιρεία, με την υποστήριξη του Ιδρύματος Νίκος Δασκαλαντωνάκης

The Conference entitled "Eleutherna, Crete and the Outside World" was organized by the University of Crete, the Research and Study Center of the Museum of ancient Eleutherna and the Mediterranean Archaeological Society, with the support of the Nikos Daskalantonakis Foundation

Πρόγραμμα Συνεδρίου Conference Program

ΠΕΜΠΤΗ 31 ΜΑΪΟΥ 2018 / THURSDAY 31 MAY 2018

17.30	Προσέλευση / Arrival Εγγραφή Συνέδρων / Registration
18.00	Έναρξη του Συνεδρίου / Opening of the Conference
18.00 - 18.30	Χαιρετισμοί / Welcome Speeches
18.30	Καθηγητής Ν. Χρ. Σταμπολίδης, Η Ελεύθερνα και ο Έξω Κόσμος Professor N. Chr. Stampolidis, Eleutherna and the Outside World
20.00	Δεξίωση / Welcome Reception

ΠΑΡΑΣΚΕΥΗ 1 ΙΟΥΝΙΟΥ 2018 / FRIDAY 1 JUNE 2018

Η Ελεύθερνα και ο Έξω Κόσμος I / Eleutherna and the Outside World I

1η Συνεδρία / Session 1

Προεδρείο / Chair : Πέτρος Θέμελης – Dario Palermo

9.00	Προσέλευση / Arrival
9.30 - 9.50	Θεμιστοκλής Λιανός, Ένας μίτος από πηλό: σχέσεις Ελεύθερνας-Κυκλάδων-Αττικής μέσα από την κεραμική της Πρώιμης Εποχής του Σιδήρου
9.50 - 10.10	Antonio Bianco, Pithos burials in the necropolis of Orthi Petra at Eleutherna: some preliminary aspects
10.10 - 10.30	Giacomo Fadelli, Cypriot influences in Early Iron Age Cretan panoply: the evidences of Orthi Petra at Eleutherna
10.30 - 10.50	Κώστας Μάρκος, Μισθοφόροι τοξότες από την Ελεύθερνα – προσεγγίσεις μέσα από τη μελέτη των βελών
10.50 - 11.10	Συζήτηση / Διάλειμμα Discussion / Break

11.10 - 11.30	Βικτώρια Κουντούρη, Εισηγμένη εύθραυστη πολυτέλεια: υάλινα αγγεία από τη νεκρόπολη της Ορθής Πέτρας στην Ελεύθερνα
11.30 - 11.50	Δημήτρης Λογοθέτης, Ένα Λιοντάρι εγκλωβισμένο στη χρονοκάψουλα: Το περίαπτο της θεάς Sekhmet από την Ελεύθερνα και η Ανατολή στις ταφικές τελετουργίες της Κρήτης του 8ου αιώνα π.Χ.
11.50 - 12.10	Καθηγητής Νικόλαος Χρ. Σταμπολίδης, Από το εργαστήριο του Ηφαίστου: Χάλκινες φιάλες με λατρευτική σκηνή από την Ελεύθερνα
12.10 - 12.30	Φίλιππος-Μιχαήλ Ρούσσο, Non Omne Quod Nitet (Solum) Aurum Est. Κρατήρες από Εναγική Πυρά από τη Νεκρόπολη της Ελεύθερνας
12.30 - 12.50	Κωνσταντίνος Κορακιανίτης, Imported black-figure sherds from Eleutherna
12.50 - 13.10	Μανόλης Στεφανάκης, Ελεύθερνα: νομισματική κυκλοφορία και εικονογραφικές επιρροές
13.10 - 13.30	Βάννα Νινιού-Κινδελή – Κατερίνα Τζανακάκη, Το ταφικό μνημείο του Ελευθερναίου Σωτηρίου στην Απτέρα: ανασκαφικά δεδομένα και κτερίσματα
13.30 - 13.50	Νίκη Οικονομάκη, Eleutherna beyond its territory: The epigraphic evidence
13.50 - 14.10	Παυλίνα Καραναστάση, Η Ελεύθερνα στους ρωμαϊκούς χρόνους. Μια κρητική πόλη σε μια «παγκοσμιοποιημένη» κοινωνία
14.10 - 14.20	Agamemnon G. Pantel – Beatriz del Cueto, Παρουσίαση της αρχιτεκτονικής αποτύπωσης της ελληνιστικής γέφυρας της αρχαίας Ελεύθερνας
14.20 - 15.40	Συζήτηση / Γεύμα Discussion / Lunch Break

Η Ελεύθερνα και ο Έξω Κόσμος II / Eleutherna and the Outside World II

2η Συνεδρία / Session 2

Προεδρείο / Chair : **Παυλίνα Καραναστάση – Louis A. Ruprecht Jr.**

15.40 - 16.00	Πέτρος Θέμελης, οι αστικές επαύλεις της Ελεύθερνας και τα πρότυπά τους
16.00 - 16.20	Σταυρούλα Μαρκουλάκη, Κίσσαμος-Ελεύθερνα: η διαμόρφωση της κατοικίας και το περιβάλλον της κατά την περίοδο της ρωμαιοκρατίας
16.20 - 16.40	Δημήτριος Σχοινοχωρίτης, Διόνυσος και Σάτυρος: Ένα Αττικό (;) Τραπεζοφόρο στην Ελεύθερνα
16.40 - 17.00	Νταλαπέρας Σωτήριος, Λίθοι επί παραγγελία; Εισηγμένα αρχιτεκτονικά μέλη από την Βασιλική της Αγίας Ειρήνης στην Ελεύθερνα
17.00 - 17.20	Αναστασία Γιαγκάκη, Οι σχέσεις της Ελεύθερνας με τον μεσογειακό χώρο κατά την πρώτη Βυζαντινή περίοδο της Κρήτης μέσα από τη μελέτη της κεραμικής
17.20 - 17.40	Ναταλία Πούλου, Η Ελεύθερνα και η Κρήτη στα θαλάσσια δίκτυα της ανατολικής Μεσογείου κατά την Βυζαντινή περίοδο
17.40 - 18.00	Διάλειμμα / Break

18.00 - 18.20		Τσιγωνάκη Χριστίνα, Η Ελεύθερνα και οι Άραβες: με αφορμή ένα νομισματικό εύρημα από τις ανασκαφές του Τομέα ΙΙ στο Πυργί
18.20 - 18.40		Anagnostis P. Agelarakis, Bioarchaeological evidence reflective of the use of the kick-wheel by a female ceramicist in Archaic Eleutherna is juxtaposed to a projected counterpart from the Late Classical period in Thasos island
18.40 - 19.00		Agelarakis Argiro – Anagnostis P. Agelarakis, Investigation on the nature, availability, and medical effectiveness of Hippocratic cataplasms potentially used in the treatment of head trauma of Eleuthernian warriors and elsewhere in ancient Greece

Ο Πρινιάς και ο Έξω Κόσμος / Prinias and the Outside World

3η Συνεδρία / Session 3

Προεδρείο / Chair : **Αθανασία Κάντα – Maria Intrieri**

19.00 - 19.20		Salvatore Rizza, Tipologie tombali ed organizzazione spaziale nella necropolis di Siderospilia a Priniàs
19.20 - 19.40		Katia Perna, La necropoli di Siderospilia a Priniàs nell'ambito delle relazioni tra Creta e l'Egeo
19.40 - 20.00		Giacomo Biondi, La ceramica protogeometrica della necropoli di Siderospilia di Priniàs e i contatti esterni dell'anonima città sulla Patela agli inizi del I millennio a.C.
20.00 - 20.20		Antonella Pautasso, Il "Signore dei leoni" a Priniàs. Recezione delle immagini e processi identitari a Creta nell'età del Ferro
20.20 - 20.40		Rossella Gigli Patanè, Gli ori di Priniàs
20.40 - 21.00		Συζήτηση / Discussion

ΣΑΒΒΑΤΟ 2 ΙΟΥΝΙΟΥ 2018 / SATURDAY 2 JUNE 2018

Κρήτη, Κύπρος, Αιγαίο και Ανατολική Μεσόγειος /

Crete, Cyprus, the Aegean and the Eastern Mediterranean

4η Συνεδρία / Session 4

Προεδρείο / Chair : **Αναγνώστης Π. Αγελαράκης – Antonella Pautasso**

9.00		Προσέλευση / Arrival
9.30 - 9.50		Μιμίκια Κρίγκα, Η διακίνηση προϊόντων και αντικειμένων κύρους στο Αιγαίο και την Ανατολική Μεσόγειο λίγο πριν την ηφαιστειακή έκρηξη της Θήρας
9.50 - 10.10		Ελευθέριος Πλάτων, Χαυλιοφόρα σκαραβοειδή στα ανατολικοκρητικά μινωικά ιερά: μία θρησκευτική ιδέα αιγυπτιακής προέλευσης αναμορφωμένη στην Κρήτη;
10.10 - 10.30		Αναστασία Τζιγκουνάκη – Άρτεμις Καρναβά, Εγχάρakta και εμπίεστα αντικείμενα από τη μινωική θέση Καλό Χωράφι Μυλοποτάμου

Incised and impressed objects from Kalo Chorafi, Mylopotamos in Rethymno

Anastasia Tzigounaki – Artemis Karnava

Introduction

The extensive Minoan settlement in the bay of Kalo Chorafi is located to the east of the modern, coastal village of Balí on the north coast of central Crete (Fig. 1). It was spotted initially in the 1980s by the antiquities conservator Kostis Nikakis, and two decades later it was re-discovered by the archaeologist Katerina Athanasaki.

The Minoan settlement is excavated since 2014 under the direction of Anastasia Tzigounaki¹. Kalo Chorafi² is one of a series of coastal settlements in the wider area of the north coast,³ such as Panormos, Panagia in Charakas and Katevati⁴ to its west and Pera Galenoi⁵ and Agia Pelagia⁶ to its east (Fig. 2).

Fig. 1 General view of the bay of Kalo Chorafi (Google Earth).

Fig. 2 The settlement of Kalo Chorafi and its neighboring ancient sites.

1. Warm thanks are due to INSTAP, the Psychia Foundation and the Regional Development Fund of the Region of Crete for the funding of the excavation; also, to Massimo Perna for the discussion on the loomweight, as well as Maurizio del Frio and Maria Anastasiadou, who read advanced versions of the paper. The archaeologists responsible for the trenches were Natalia Stroppiana and Nikos Daskalakis, aided by the graduate students Tiffany Kerschenmeyer, Gwendoline Guillaume and Betty Ramé. The exemplary conservation of the finds was carried out by Vicki Kontogianni, the site plan has been drafted by Clair Maragaki, the find drawings are the work of Ioannis Androulidakis, the photographs are by Nikos Daskalakis and Georgios Droudakis, and photogrammetry was carried out by Gianluca Cantoro.

Fig. 3-4 Plan (Clairy Maragaki) and photogrammetric view (Gianluca Cantoro) of the excavated area at Kalo Chorafi.

The site is named already in maps dating to the second half of the 17th c. AD⁷, while the church of the 318 Theophoric Fathers to the south-east of the archaeological site testifies on the entrance to its last construction phase that dates to 1658. The Minoan coastal settlement is located on a hill, where a building complex is currently under excavation. So far, its north-west and south-west section have been investigated, as well as the western exterior corner of its façade; the excavation has revealed thirteen rooms of the building complex, which measure in total ca. 300 m² (Figs. 3-4).

On the steep, northern limit of the hill, which ends in a bay approached with great difficulty, part of an ancient wall is visible, whereas its missing part is abruptly interrupted above the cliff. It is obvious that landslides at this spot probably also eliminated architectural formations that were on top of it. Ancient walls can also be seen to the north-west of the complex in the west part of the peninsula, and they are preserved to a height of at least two rows. It is unfortunate that in 2008 a bulldozer destroyed a big section of land between the hill and the peninsula, where the remaining architectural formations can be seen. The demolition certainly destroyed the physical and cultural landscape and probably also parts of ancient buildings. It was on account of a fresh illegal dig in 2012 that a rescue excavation was initiated, which subsequently became a proper research excavation.

The building complex, according to the preliminary study of the excavation data, dates to the Middle Minoan III-Late Minoan I period⁸. Additionally, remains of at least two walls, that were founded on the destruction layer and the walls of the aforementioned period, appear to date to Late Minoan III on the basis of few but characteristic movable finds, mainly of ritual character.

In this presentation we do not focus on the finds of the so far excavated rooms of the Middle Minoan III-Late Minoan I period. Instead, we chose to focus on some incised, engraved and impressed objects recovered at the site. These objects demonstrate some use for stamping and writing in the area, activities that were carried out in the Cretan Neopalatial period throughout Crete, but also outside the island in areas of the Aegean that were clearly related to Crete⁹. Additionally, and rather unexpectedly, one of these finds also enmeshes the site in communication networks of the broader Eastern Mediterranean region. It is therefore these finds from Kalo Chorafi that insert the site in a discussion about Crete and the outside world, as was the focus of this colloquium.

The incised, engraved and stamped objects

Objects 2-5 were found in the same layer in space 13, adjacent to space 11 where object 6 was found. These two spaces form the western corner of the building on the top of the hill. Objects 2-6 were probably scattered in different ground-floor rooms as contents of a unified upper floor above spaces 11 and 13.

7. The site appears in a map of Crete by Marco Boschini dating to 1651 as 'Calochorafiti'. It subsequently appears in maps by Vincenzo Coronelli in 1692-1696 as 'Calochorafiti'.

8. The definition of MMIII as laid out in Macdonald – Knappett 2013.

9. For the use of Linear A writing and the 'export' of the Minoan administrative Neopalatial system in the Aegean, see Karnava 2008; Karnava 2018, 236-238. Of particular interest are the instances of Miletus (Del Frio et al. 2015) and the northeast Aegean area including Samothrace (Girella – Pavúk 2016).

1. Conical cup with a Linear A incised sign (Fig. 5)

Archaeological context: space 4, corridor between spaces 3 and 10. Found together with many handleless conical cups, some of which are miniature; also, numerous miniature jugs, which have parallels in Pera Galenoi¹⁰ and Agia Pelagia¹¹; pedestalled vases (chalices or fruit-stands/communion cups), also found in Zominthos¹²; lamps, also found in Zominthos and Pera Galenoi¹³. All these items were scattered between ground-floor spaces 3, 4 and 12, and they appear to have been the contents of a unified upper floor.

The object: AMR Π 36184 (X4/A74/2014), clay conical cup, partly preserved (height 4.1 cm, base diam. 3.8 cm, wall thickness 0.5-0.6 cm). Dating: Middle Minoan III-Late Minoan I period.

The incision: Linear A sign, incised after firing under the base of the cup (height 2.3 cm).

Transcription: AB 67 (𐀓)¹⁴.

Comment: The sign can be safely identified as AB 67. It can be read with approximation as *ki*¹⁵; the fact that it is most clearly the depiction of a conical pot does not exclude its possible phonetic value. Although in the overwhelming majority of its attestations in the Linear A corpus the middle stroke (inside the triangle that stands for the body of the pot depicted) is horizontal, and in multiple instances a further horizontal stroke designates the pot's base, the overall number of strokes and their combination make AB 67 as the most plausible transcription candidate. The decisive factor for its recognition is the rendering of the 'handle' with two straight, intersecting strokes¹⁶.

There is another instance of a one-handled clay cup that bears the same, incised Linear A sign, the difference being that the sign was incised on the body of the vessel¹⁷. Moreover, there is a parallel for writing in Linear A under the bottom of clay pots, because of the instance of a two-sign inscription (one of the signs of which is AB 67), probably incised after firing as well¹⁸.

Fig. 5 Conical cup AMR Π 36184 (X4/A74/2014) with Linear A sign (photos: N. Daskalakis; drawing of profile: I. Androulidakis; sign drawing: A. Karnava).

Fig. 6 Conical cup AMR Π 36189 (X13/A17/2018) with Linear A sign (photo: N. Daskalakis; drawing: A. Karnava).

2. Conical cup with incised Linear A sign (Fig. 6)

Archaeological context: space 13, situated in the south-west corner of the building complex and flanked by its exterior walls.

The object: AMR Π 36189 (X13/A17/2018), clay vase, partly preserved (height 3.8 cm, base diam. 4.5 cm, wall thickness 0.6 cm). Dating: Middle Minoan III-Late Minoan I period.

The incision: Linear A sign, incised before firing under the base of the cup (height 1.6 cm).

Transcription: AB 37 (𐀑)¹⁹.

Comment: The sign is identified on the basis of its shape. AB 37, outside its two, external, curved strokes, sometimes also has an additional medial element²⁰. In our instance, it is not clear whether the additional stroke that is clearly discernible was done on purpose or is accidental.

10. Μπάνου – Τσιβιλικά 2000, 120, fig. 23.

11. The relevant unpublished material can be seen at the permanent exhibition of the Archaeological Museum of Herakleion.

12. <https://interactive.archaeology.org/zominthos/2018/07/field-notes-2018-week-3/> (last accessed: 17/01/2019).

13. Specimens of these vessels can be seen in the temporary exhibition of the Archaeological Museum of Rethymnon, which opened in August 2016 in the Venetian church of St. Francesco.

14. The enumeration of Linear A signs and documents in general follows Godart – Olivier 1976-1985.

15. Olivier 1975, 443-446.

16. The closest parallels of this rendering are attestations from Agia Triada (for instance, HT 1.1, HT 2.3, HT 85.b.1) and Palaikastro (attestations on stone libation tables: PK Za 8a, PK Za 11a, PK Za 12a).

17. The pot was found in Ayia Irini on Keos (KE Zb 3) (Karnava 2008, 381-383); although not stated in any of its publications, it seems to have been incised before firing.

18. A clay pot from Phylakopi in Melos (MI Zb 1).

19. The enumeration of Linear A signs and documents in general follows Godart – Olivier 1976-1985.

20. HT 12.1; HT 27a.1; LA Zb 1; ZA 14.2.3. In some instances the medial stroke is not perpendicular to the sign's external strokes but parallel, a fact which appears to be a simple graphic variety.

Fig. 7 Impressed pot handle AMR Π 36186 (X13/ME11/2017) (photo: N. Daskalakis; drawing of handle: I. Androulidakis; drawing of seal: A. Karnava).

3. Impressed clay pot handle (Fig. 7)

Archaeological context: space 13, situated in the south-west corner of the building complex and flanked by its exterior walls. The handle was found together with no. 4 (impressed pot base) and no. 5 (seal) in the vicinity of a pithos base.

The object: AMR Π 36186 (X13/ME11/2017), clay horizontal handle of a medium-sized closed vessel, partly preserved (pres. length 5.5 cm, width 4.1-5.8 cm, thickness 2.9 cm). Dating: Middle Minoan III-Late Minoan I (context dating), or earlier (seal impression motif).

The impression: round, flat-faced seal, stamped before firing, badly eroded (diam. seal face 1.2 cm); whirl motif around a sizeable central, compact boring, surrounded by a thin border line.

Comment: Although the impression is badly eroded, the motif can be suggested with certainty to have been that of a whirl. The central part of the engraved surface is taken up by a boring and the whirl's 'tentacles' stem from it; in a section of the stamped surface there are clear remains of a border line (except for the one of the seal face). There are a number of almost exact parallels for this motif and almost all of them can be found on one of the faces of soft stone three-sided prisms²¹, typical of Protopalatial seal production of central Crete²². The seals that attest to the motif reportedly derive from the Malia - Lasithi and the Messara regions²³. The whirl motif has been suggested to have played a specific role to the administrative system²⁴.

A peculiarity of the impression needs to be stressed here (and the same is also valid for the next impressed item in this account, no. 4): the seal produced an almost perfect circular imprint, but in one section the contour of the imprint was distorted by something that was seemingly attached to the seal. One could consider the distortion accidental, but the same is observed in the following impressed pot base from Kalo Choraifi; also, there have been similar 'accidents' on other stamped clay objects, such as on a pot from Petras²⁵, and a stamped loomweight from Akrotiri in Thera²⁶. The distortion in the specimen from Thera appears to have been caused on account of a reed that was probably inserted in the seal's suspension hole.

Seal impressions on pottery vessels as well as loomweights have been observed previously in Minoan times²⁷. It appears however to have been a practice mostly exercised in Protopalatial times, as the seals, that are normally attested through their impressions, or the contexts in which they were found, point to. But stamped handles, or pots in general, with Protopalatial seal impressions are also attested in later contexts, they therefore need to be explained either in terms of heirloom seals (used in later times), or old pots, kept and used in later contexts. But because when a stamped vessel (or a fragment) is found even in later contexts, they all seem to attest to Protopalatial seals, it is more probable that we are seeing the instance of Protopalatial pots recovered in later contexts. However, until now, no evidence from Kalo Choraifi can be dated to the Protopalatial period, unlike in the neighbouring sites of Katevati, 2 km to the west (which was visible from Kalo Choraifi), or Pera Galenoi to the east, as is suggested by their respective excavators.

21. CMS III no. 208a; IV no. 053 (a stamp seal); VI no. 41b; VI no. 51b; VI no. 75b (motif also encircled by a border line); XI no. 32a; XI no. 38b.

22. Anastasiadou 2011, 285-286, pls. 100-101, motifs 255: whirl, and 256: whirl spiral; the author lists both these motifs under her Malia/eastern Crete steatite prisms group.

23. The seal impression is in a bad state of preservation, therefore the presence of a central, additional boring on the center of the original seal face cannot be excluded. If such were the case, then the seal motif would belong to Anastasiadou's Messara chlorite prisms group (2011, 120-137). For parallels, see CMS II, 1 no. 452b; IV no. 53; IX no. 74d (M. Anastasiadou, pers. comm.).

25. CMS VS1B no. 329. Krzyszkowska 2016.

26. Karnava 2018, 166-169, 171-171.

27. From Malia: Detournay et al. 1980, nos. 287-290. From Palaikastro: Eccles 1939-1940, 47; From Pyrgos: Weingarten 2015, 72-73; From Petras: Krzyszkowska 2016, 125-128. The latter publications contain updated bibliography on new finds from Syme Viannou, Petras, Samothrace, Juktas, Archanes and Poros. A new publication with relevant material from the 'Magasins Dessenne' in Malia is currently under way (M. Anastasiadou, pers. comm.).

4. Impressed clay pot base (Fig. 8)

Archaeological context: space 13, situated in the south-west corner of the building complex and flanked by its exterior walls. The base was found together with no. 3 (impressed pot handle) and no. 5 (seal) in the vicinity of a pithos base.

The object: AMR Π 36187 (X13/ME12/2017), closed/medium-sized clay vessel base, partly preserved (pres. height 2.9 cm, base diam. 3.8 cm, wall thickness 0.4 cm). Dating: Middle Minoan III-Late Minoan I (context dating), or earlier (seal impression prism dating).

The impression: one (flat, rectangular) face of a four-sided prism, impressed before firing under the base, totally eroded (dimensions 1.4×0.7 cm).

Comment: Although the original seal motif is not preserved (except for some faint traces), the seal face shape (rectangular, oblong surface) is immediately indicative of the seal shape, a four-sided prism. Additionally, a distortion of a section of the contour of the imprint is visible in one of its corners (see the previous object for relevant discussion). Four-sided prisms made of soft and hard stones are a seal shape typical of the Protopalatial period; they have been connected with the Cretan Hieroglyphic script and administrative practices of the Protopalatial period, since some of them are known to have been inscribed in this writing and administrative system²⁸. Pottery was previously known to have been stamped by four-sided prisms²⁹, but this seems to be the first time that a pot base is marked by such an impression.

The *Corpus of Minoan and Mycenaean Seals (CMS)* lists some 262 known and surviving specimens of four-sided prisms³⁰. When provenance is known, it shows their diffusion in Crete during the Protopalatial period essentially in central and eastern Crete. Only recently has a Hieroglyphic four-sided prism been found in the Vrysinas peak sanctuary, a location that marks the western-most find-spot of both four-sided prisms and Hieroglyphic seals on Crete³¹. The four-sided prism imprint from Kalo Chorafi marks the second instance of a Protopalatial phenomenon, which comprises the manufacture of four-sided prisms and the stamping of pots, in western Crete.

Fig. 8 Impressed pot base AMR Π 36187 (X13/ME12/2017) (photos: N. Daskalakis; drawing: I. Androulidakis).

Fig. 9 Soft stone seal AMR Λ 4452 (X13/2018) (photos: N. Daskalakis; drawing: A. Karnava).

5. Seal (Fig. 9)

Archaeological context: space 13, situated in the south-west corner of the building complex and flanked by its exterior walls. The seal was found together with no. 3 (impressed pot handle) and no. 4 (impressed conical cup base) in the vicinity of a pithos base.

The object: AMR Λ 4452 (X13/2018), stone lentoid seal, soft stone of dark green colour with lighter green patches (probably of serpentine³²), vertical suspension hole, complete, worn (diam. 1.5-1.6 cm, thickness 0.5 cm). Dating: Middle Minoan III-Late Minoan I (context dating), Late Minoan I (seal motif and shape dating).

Motif: full body goat/*agrimi* in left profile; it has one bent back leg, a downward tail, long horns; head and front body part as well as rear body part visible, whereas middle body part, legs and horns hardly preserved.

Comment: The seal attests to a very frequent motif, found on more than 1,000 seal faces of the Minoan era. A number of technical attributes, however, assists us in an effort to place it in a more narrow chronological window. The animal's head is rendered by two borings, one that delineates the greater part of the head and a second that stands for the animal's muz-

28. Karnava 2000, 165-168. Tzigounaki 2001, 39-44.

29. On an amphora handle from Pyrgos (CMS II, 6 no. 231. Weingarten 2015, no. 8). There is also the most interesting instance of a pithos from Papadiokambos in Siteia, dated by the excavators to Middle Minoan II-III but retrieved in a destruction layer of the Late Minoan I period, which bears ten impressions by either two different four-sided prisms, or two sides of the same prism on the lip and the handle joins (Σοφιανού – Brogan 2010).

30. <https://arachne.uni-koeln.de/arachne/> (last accessed: 21/01/2019). The data-base Arachne lists however separately all sphragistic surfaces of one seal (which could be more than one), the number 262 does not necessarily refer therefore to individual seals.

31. Hallager et al. 2011.

32. Krzyszkowska 2005, 357: "serpentine: soft to medium-hard stone (Mohs 2-4) usually of greenish hue, sometimes with variegated effects (i.e. like a serpent or a lizard); used for seals in Late Minoan I-III, also stone vases".

zle; the two are joined by a straight line. Additionally, the front part of the animal's neck is rendered by a double, curved line, which creates the effect of a pronounced contour of the animal's body shape. Both traits appear on seals with full body goat motifs of the 'Cut Style', a highly stylized cutting technique that was used to carve Minoan seals in the Late Minoan I-II periods³³. But our specimen here is a simpler and more minimal version of the goat motive: it seemingly has one back leg, a hanging tail, small borings are further attested on its horns, its rear flank and thigh are rendered by a single, curved stroke. The closest soft stone parallels to our specimen are all dated on the basis of their style and craftsmanship in Late Minoan I-II periods³⁴. The seal, coming from a Neopalatial context, can be placed within the Late Minoan I soft stone seal production³⁵.

6. Incised loomweight (Fig. 10)

Archaeological context: space 11, in a short distance from the floor (the greatest section of the room: the bedrock functioned as floor), in contact with the south-west wall of the room. Found together: handleless cups (Fig. 11: AMR Π 36183 (X11/A32/2017) and a pedestalled vase³⁶ (Fig. 12: AMR Π 36182 (X11/A35/2017)).

The object: AMR Π 36185 (X11/ME4/2017), clay discoid loomweight with one prominent suspension hole, complete except for section of the suspension hole (diam. 8.3-9.1 cm, thickness 1.8 cm, weight 175 gr). Dating: Middle Minoan III-Late Minoan I.

The incision: Cypro-Minoan sign, incised before firing (height 3.7 cm).

Transcription: CM 061 (𐀓)³⁷.

Comment: The vases found at the same layer and near the loomweight, such as the handleless cups and the pedestalled vase (Figs. 11-12), are dated to Middle Minoan III-Late Minoan I. The latter is more elaborate than the numerous others pedestalled vases/chalices-fruitstands-communion cups found at the site, most of them together with object 1 (AMR Π 4452), as it is the only pedestalled vase with an almost vertical, outward-leaning lip; numerous conical cups were also found in 2012 in the surface layers of Room 11.

The sign, rather surprisingly, does not find an equivalent among the Cretan writing systems (Cretan Hieroglyphic and Linear A). But it does have clear equivalents among the Cypro-Minoan (CM) writing systems, namely CM 1 and CM 2, where sign no. 061 appears as its most likely parallel³⁸. These parallel attestations in CM 1³⁹ are found on documents that date anywhere from the beginning of the writing system (c. 1525 BC) to its demise (c. 1050 BC), whereas the CM 2 attestations on the Enkomi clay tablets are dated to the Late Cypriot III period (1210-1100 BC as terminus ante quem).

33. Such as CMS III nos. 441-442 (of unknown exact provenance).

34. Soft stone goat versions: CMS II4, no. 201; III no. 445; III no. 503b (all probably from Malia); III nos. 447-448 (of unknown exact provenance). All these specimens also have vertical suspension holes.

35. See Pini 1995 for the dating of Late Minoan soft stone seals.

36. Compare: Πεθεμωτάκης 1997, 48, 59, fig. 21 γ, δ, ε and Karetsou 2013, 89, fig. 7.30, #23. Both excavators date their finds in Middle Minoan III.

37. The enumeration of Cypro-Minoan signs and documents in general follows Olivier 2007.

38. The sign is attested on a number of clay tablets from Enkomi in Cyprus (##207, ENKO Atab 002; ##208, ENKO Atab 003; ##209, ENKO Atab 004), on a clay ball from the same site (dubious readings: ##071, ENKO Abou 068), and a bronze tool with probable origin from Enkomi (##169, ENKO? Mins 002).

39. ##071, ##169.

It is generally accepted that the Cypro-Minoan scripts of the 2nd millennium BC constitute an adaptation of the Cretan Linear A script for the language or languages of Cyprus⁴⁰. This suspicion has existed ever since the first CM documents were discovered and Arthur Evans posited a 'Minoan colonization of Cyprus'⁴¹. Nowadays such hypotheses are refuted and we are slightly clearer than Evans was on how things transpired⁴². But one of the problems that remain is how it all started: the two islands seem to have had minimal contacts around the middle of the 2nd millennium BC (at least none that are archaeologically visible), but the adaptation of writing certainly shows that there was a relation more profound than can be demonstrated. Here we have the instance of the oldest CM sign attested in the Aegean and, all the more convenient, in Crete, where Linear A originates⁴³. The Cretan Neopalatial period (MM III-LM I), which appears to be the main habitation phase of the site, spans between 1750-1500 BC ('high' chronology) or 1700-1450 BC ('low' chronology). The earliest CM document, a clay tablet from Enkomi, dates to the Late Cypriot IB period, namely 1525-1425 BC; this period is considered the terminus ante quem for the introduction of writing in Cyprus⁴⁴. The Kalo Chorafi loomweight belongs therefore to the earliest period of CM script use, from which the Enkomi tablet is so far our only securely dated evidence.

Discoid loomweights are considered the hallmark of Minoan weaving technology between Early Minoan II and Late Minoan III⁴⁵. At Kalo Chorafi, three more discoid loomweights with one non-prominent suspension hole each were found in Room 3, whereas in Room 12 one more discoid loomweight with one non-prominent suspension hole, and one more loomweight with two non-prominent suspension holes were found; all these loomweights are dated to Middle Minoan III-Late Minoan I on account of their retrieval context. Cypriot textile technology of the Bronze Age, on the other hand, made use of different loomweight shapes: clay loomweights of pyramidal shape are attested from the Early Cypriot period down to the Iron Age and their weight ranges from 220 gr to more than 1,000 gr; the Late Cypriot period sees the introduction of a flat, circular loomweight with a central hole, and both types co-exist until the end of the Bronze Age⁴⁶.

Since the early Middle Bronze Age the Cretan discoid loomweights were also present in numerous sites in the southern Aegean, a fact which is thought to represent the adoption of the warp-weighted loom outside Crete, the weaving 'machine' for which they were made⁴⁷. Although research in the last years has pointed to actual exports of Minoan loomweights around the Aegean, and not just local copies of this textile tool, prompting discussions about technology transmission and craftsmen mobility⁴⁸, there is as yet no reported case of non-Cretan loomweights on Crete. There is therefore no reason to suggest a non-Cretan origin for this inscribed loomweight; whether textile tools moved between sites or regions of Crete is another matter, which is not explicitly addressed in literature so far. The clay of the loomweight does not appear significantly different from the clay of the various pots retrieved at the site; petrographic analysis is, however, yet to be carried out.

7. Linear A incised sign on a body fragment (Fig. 13)

Archaeological context: surface find; retrieved outside of the building complex, in a distance of about 20 m to the south-west of Room 13.

The object: Π 36188 (EE/2018), clay pot body sherd ('ostracon?'), partly preserved (height 4.3 cm, width 5.7 cm, wall thickness 0.8 cm). Dating: probably Middle Minoan III-Late Minoan I.

The incision: Linear A sign, incised after firing on the exterior side of a pot body sherd (height 2.8 cm).

Transcription: AB 58 (𐀀).

Comment: The sign can be safely identified with AB 58. It can be read with approximation as *su*⁴⁹. As a matter of

fact, all the surviving attestations of AB 58 in the Linear A inscriptions corpus show consistently a sign facing in the opposite direction from the one we have at our disposal here. This fact does not pose, however, a particular problem, because the ‘mirroring’ of signs (i.e. their reversal on their horizontal axis) is not an unknown phenomenon in the early Cretan scripts (both the Cretan Hieroglyphic and Linear A). What is also unusual is the high number of strokes the sign has: AB 58 is usually composed of 4-5 strokes; the specimen in question however is composed of 8 strokes (the additional strokes are added in the internal part of the sign). Yet, there is one instance that matches the current version, most notably from Knossos⁵⁰.

The central and symmetrical position of the sign with respect to the fragment’s edges makes it likely that this is an ‘ostracon’, i.e. the sign could have been incised on the sherd after the pot was broken.

Conclusion

The investigation at Kalo Chorafi in Rethymno aims, among other goals, at defining the role of the ancient site in contacts and commercial routes during the Minoan Neopalatial period. As far as neighbouring sites are concerned, it has been suggested that some were connected to the exploitation of metal-rich areas in their hinterland⁵¹. This hinterland are the metalliferous Talaia Mountains, which take their name from the myth of the metallic giant Talos. Kalo Chorafi was also probably connected with the exploitation of metals, as pieces of metal slag were recovered at the site; actual metal objects, which include two copper objects and one fragment of gold sheet, are so far rare. The specific positioning, however, of all these ancient sites in the area as harbour sites also poses the question as to their functioning as intermediary hubs for the dispatch or export of as yet unspecified goods.

The finds presented here, i.e. the impressed and incised objects as well as a seal of local (Cretan) manufacture, place the site firmly in communication networks that function throughout the island in Minoan times. An observation which is valid for all of them is that because they were objects that could easily be transported (pots, seal, loomweight), it is not clear at present whether they were locally made or brought in from elsewhere. Whichever the case, the pottery sherds inscribed with Linear A signs (nos. 1, 2 and 7), point to the presence on the site of literate persons: either these persons were responsible for incising the signs themselves, or they had some use or made some sense out of them after they received them.

Special mention should be made to the impressed sherds (nos. 3 and 4). The debate about the eventual meaning and importance of seal impressions on Minoan pottery was well under way before the Kalo Chorafi impressions were retrieved⁵². The problem is that they remain characteristically few amidst the bulk of Minoan pottery at our disposal⁵³, and the discussion focused on whether they testify to some sort of administrative action involved or not. What needs to be stressed, however, on account of the Kalo Chorafi specimens is that new finds seem to follow the patterns laid out by the previous finds: stamped by flat-faced, Protopalatial seals, the majority of instances are attested on horizontal handles of medium-sized jars. If new finds conform to tendencies already detected previously, and both the Kalo Chorafi specimens do, it is fair to suspect that pot stamping represents something that was meaningful in Minoan times, just not to us.

Finally, the discoid loomweight incised with a sign belonging to the 2nd millennium BC Cypro-Minoan syllabary adds a further node to the string of Minoan overseas contacts. The loomweight, which seems to be of Cretan manufacture (although not certain whether produced on-site), testifies to a pre-firing sign. Because of it, we need therefore to assume the presence of a person with knowledge of the Cypro-Minoan writing system during its manufacture. Since textile manufacture is often seen as a female occupation⁵⁴, it would be tempting to posit a connection between women and literacy; we would have to establish first however a connection between women and the production of their textile tools, for which we have no evidence at present⁵⁵. But for now and more importantly, the loomweight demonstrates that the relations of Cyprus with Crete in the mid-2nd millennium BC were characterized by reciprocity rather than passive reception, a fact that opens new paths for our thinking of the Eastern Mediterranean at the time.

50. KN Zf 31, a silver pin.

51. For the site of Pera Galenoi: Λιανέρης 2000; Μπάνου – Τσιβιλικά 2000. For the site of Katevati: Παπαδοπούλου – Φλεβάρη 2012.

52. The problem was extensively discussed by J.-Cl. Poursat, the excavator of *Quartier Mu* in Malia (a summary of his views: Poursat 2001) and W. Müller, one of the *CMS* editors (Müller 1999; Müller 2004). More recently, Weingarten 2015 and Krzyszkowska 2016.

53. Krzyszkowska 2016, 127: “in toto, no more than 35 examples are documented..., about seven ... on the rims or bases of vases; the remainder occur on handles”.

54. Textile production as a female occupation: Steel 2016, 389-390.

55. An interesting take on female mobility in the Bronze Age in Gorogianni et al. 2015.
